Important Notations

⁰⁰ : SER6500 only.

⁴⁰ : SER6540 only.

INSTALLATIONS

Ribbon cassette installation

1. Before inserting ribbon cassette (②), turn knob (①) counterclockwise to prevent twisting the ribbon.
2. After inserting the ribbon cassette (②) at the center (③) of the printer, turn the knob (①) counterclockwise again to make sure the ribbon moves freely in the cassette.

www.AnchorData.co.uk

Receipt/journal paper insertion

1. Using a new roll of paper, unroll the paper about 150mm and fold the paper as shown in the right figure.
2. Insert folded paper into the chute (②) of the ERP300V printer. While holding the lever (①) down, pull the paper out until the fold point (③) is completely out of the printer. And turn the knob (④)counterclockwise.
3. Cut the receipt paper.
4. Insert the journal paper into the slit (③) of the rewind spindle. Wind the spindle three or four times.
5. Push end disk (④) onto the spindle as shown in the right figure.
6. Insert the spool to the printer part (⑤).
7. when the journal paper is loose, rewind the spindle to tighten the paper.

All clear procedure

Turn key to S-Mode. Unplug the register, hold down the third key up from the lower right key on the keyboard, while holding down this key plug the register back in. An all clear keyboard receipt is issued.

Use this key for all clear procedure regardless of what key function is programmed at that location

REGI NO.	X/TIME	: This machine's register no.
DDMMYYHHMM	X/TIME	: Current date and time.
Z3(SER6500) / Z2(SER6540)	X/TIME	: If you press "1" and X/TIME key the ECR makes Z3/Z2 report area. Otherwise it will not make Z3/Z2 area.
NO. OF CLERKS	X/TIME	: Enter no. of clerks. If you press only X/TIME key then machine's no. of clerk will be one.
CHECK TYPE	X/TIME *	: If you press "1" and X/TIME key, the check type will be SOFT CHECK. Otherwise it will be HARD CHECK.
CHECK LINE	X/TIME **	: If you select check type as SOFT CHECK, it requires CHECK LINE.
NO. OF CHECKS	X/TIME	: Enter no. of checks. If you press only X/TIME key then no. of check will be zero.
CLERK INT	X/TIME	: If you press "1" and X/TIME key, this machine will allocate memory for clerk interrupt / floating clerk.
PLU STOCK	X/TIME	: If you press "1" and X/TIME key, this machine will allocate memory for PLU stock taking feature.
NO. OF PLUs	X/TIME	: Enter no. of PLU. If you press only X/TIME key then no. of PLU will be automatically set as a maximum value.

* There are two check types. HARD CHECK and SOFT CHECK.

HARD CHECK carries only sales amount No Detail of the bill is stored.

SOFT CHECK carries all information regarding a check, this option would normally be used where full detail of the check is required.

** CHECK LINE means the no. of detail lines which contain sales information. i.e. number of items sold on a bill.

HARD CHECK only hold the sales amount, so if your check type is HARD CHECK it does not require "Check Line" preset and skips this part.

Initial clear procedure

Turn key to P-Mode. Unplug the register, hold down the lower right key on the keyboard, while holding down this key plug the register back in. An initial clear receipt should be issued.

Use this key for initial clear procedure regardless of what key function is programmed at that location

Note : After initial clear procedure the working memory is cleared.

Working memory means all data memory except report and program file.

So, if you were in the middle of transaction, the transaction is canceled.

Install default keyboard

Turn key to S-Mode. Unplug the register, hold down the second key up from the lower right key on the keyboard, while holding down this key plug the register back in. An install default keyboard receipt is issued.

Use this key for install default keyboard procedure regardless of what key function is programmed at that location

TAX PROGRAMMING

Straight Tax Programming

Control Lock Position: PGM
Programming Step

- 1) Press 72 SUBTOTAL to enter the tax program procedure.
- 2) Enter the desired Tax Rate and status from the table below and press the X/TIME key.
Then push the CASH key.

□	□	□ . □	□	□	□	□	□	□	X/TIME
N1	N2		N3	N4	N5	N6	N7	N8	
<-----RATE----->						<----STATUS----> TAX#			
1 - 4									

Add.	Meaning	VALUE	=	SUM
N6	Tax is straight % / VAT	YES = 1		
	Tax is straight % / Add On	YES = 0	A	A
N7	GST (Tax 4) is Taxable by Rate 3	YES = 4 No = 0	A	
	GST (Tax 4) is Taxable by Rate 2	YES = 2 No = 0	B	A+B+C
	GST (Tax 4) is Taxable by Rate 1	YES = 1 No = 0	C	

Programming Example: (6.5% ON TAX 1)

7	2	SBTL							
6	.	5	0	0	0	0	1	X/TIME	

Table Tax rate Programming

Programming Information

- A) Maximum 60 tax breaks.
- B) Tax breaks determine at what dollar amount an additional .01 will be added to the tax total of the sale.
- C) Determine break points by subtracting the high side of a dollar range from the high side of the dollar range. (See example on the next page)
- D) The pattern of break points is the break pattern. (Repeat breaks repeat themselves)
- E) The beginning break points that do not fit into the repeat breaks are the non-repeat breaks.

Programming steps

Control Lock Position: PGM

- 1) Press 72 SUBTOTAL to enter the tax program procedure.
- 2) Enter the desired table and press the X/TIME key.
- 3) Enter the correct tax number and then enter your table tax breaks according to your specific tax rate.

www.AnchorData.co.uk

TABLE TAX RATE PROGRAMMING

Programming Example

Tax 1 is a 6.0% Illinois Table Tax

TAX CHARGED	SALE AMOUNT RANGE	BREAK POINT
0.00	0.00 - 0.10	
0.01	0.11 - 0.21	11
0.02	0.22 - 0.38	17
0.03	0.39 - 0.56	18
0.04	0.57 - 0.73	17
0.05	0.74 - 0.91	18
0.06	0.92 - 1.08	17
0.07	1.09 - 1.24	16
0.08	1.25 - 1.41	17
0.09	1.42 - 1.58	17
0.10	1.59 - 1.74	16
0.11	1.75 - 1.91	17
0.12	1.92 - 2.08	17
0.13	2.09 - 2.24	16
0.14	2.25 - 2.41	17

Non - Repeat
Breaks

Repeat Breaks

Repeat Breaks

Repeat Breaks

Enter 72 and Press SUBTOTAL key.

Enter "1" for tax1 and Press X/TIME key.

Enter the maximum amount that is not taxed (0.10) and Press the X/TIME key.

Enter the first tax amount charged (0.01) and Press the X/TIME key.

Enter the high side of the dollar range for the first non-repeat break

which charges tax (0.21) and Press the X/TIME key.

Repeat for each non-repeat break.

72	SUBTOTAL
1	X/TIME
10	X/TIME
1	X/TIME
21	X/TIME
38	X/TIME,
56	X/TIME,
73	X/TIME
91	SUBTOTAL

Enter "91" and Press the SUBTOTAL key.

Enter the high side of the dollar range for the first repeat break in the repeat

breaks pattern (1.08) and Press the X/TIME key.

Repeat for each repeat break.

108	X/TIME
124	X/TIME,
141	X/TIME

Press CASH key to finalise.

OPERATIONS

Introduction

The operation section of this manual gives basic information about the functions performed by the register. Each of the register keys is explained, giving a general description of their operation.

Example operations are given for each function key showing correct keystrokes. Since all machines differ in the actual programming, the operation of some keys may require a management key, while other optional keys may not exist on your keyboard.

Note: Before using this System Electronic Cash Register for the first time, leave it powered On in the “REG” position mode for at least twenty-four hours. This allows the Ni-Cad battery, which maintains the memory while the power is OFF, to fully charge.

Function of mode controls

Off (lock position)

This position locks the register from operation. The key can be removed in this position

Register

This position is the normal position for registration. The key can be removed in this position.

X Position

Used to obtain reports without resetting any totals. Also, used for special operations including the operation of manager controlled function keys and training mode.

Z Position

Used to obtain reports while resetting (clearing) any total data.

Void Position

Used for voiding sales with the added security of the key positioning

P-Mode

Used for standard programming functions. Changing prices, descriptions etc.

S-Mode

Used for system programming functions.

Default keyboard layout for SER6540

Key Description

Numeric Keys:

0,1,2,3,4,5,6,7,8,9,00 are used to input numeric data (amount, quantity, program codes etc.)

Cash Key

This key is used to finalise a Cash transaction. When it is pressed, the total amount of the transaction is calculated. At the same time, a receipt can be issued and the Cash Drawer opened. The total amounts are added to the specific reports as applicable. If the amount tendered is entered into the register and this exceeds the total amount of the sale then the change will be calculated and displayed on the screen.

Cheque Key

This key is used to finalise a Cheque transaction. If the amount tendered is entered into the register and this exceeds the total amount of the sale then the change will be calculated and displayed on the screen.

Charge# key

This key is used to finalise one of eight types of Charge transaction.

Charge 1 ~ 10 keys

These keys are used to finalise a Charge transaction. Up to 10 Charge keys are available.

Cur Conv1 and Cur Conv2 keys

The Currency conversion keys are used to convert a subtotal figure into foreign currency using an exchange rate preset to each key. When this key is pressed, the register enters the currency exchange mode, and subsequent amount entries are regarded as foreign currency.

%1 - %10 keys. (Discount, surcharge etc.)

These keys can be programmed for monetary discount, monetary surcharge, percentage discount and percentage surcharge, etc.

Err Correct key

This key is used to invalidate the immediately preceding registration. The key must be pressed immediately after the incorrect entry.

Void key

This key is used to invalidate previously registered data. This operation must be made before the end of the transaction.

Cancel key

This key is used to completely cancel the last sale. If a transaction is cancelled none of the totals are updated.

P/O key

This key is used to record amounts paid out from the register. Amounts Paid Out will be deducted from Cash In Drawer total.

R/A key

This key is used to register cash received other than sales transactions. Amounts of Received On Account will be added to the Cash In Drawer total.

MDSE Return key

This key is used to register refunded goods in the registration position. This function is available for returns to Departments and PLU's. It will also return any tax that may be applicable.

Exempt Tax key

This key is used to change the tax status of the proceeding sale item.

Eat In /Take Out/Drivethru keys

These keys are used to provide sales data on the various type of transaction. i.e. where the goods are taken out?. For areas that have different tax rules the tax charges may be exempt.

Print key

This key enables any items to be printed to a kitchen printer even when the item is not preset to print to a printer.

/ No sale key

The #/No Sale key is used as a non-add key, and prints up to a 7 - digit numeric entry on the receipt and journal. This entry will not add to any sales total. The #/No Sale key is also used for No Sale operations to simply open the cash drawer.

Validation on Slip key

This key is used to print twice one-line validation through the slip printer.

Promo key

This key is used to sell an item at no charge.

Waste key

This key is used to write off items.

Time In/Out key

This key is used to Clock In / Out clerks. Information regarding the hours a clerk has worked is stored in the register memory.

Cashier#

This key is used to sign on/off a cashier. Either by Cashier Number or by Secret Cashier Number.

Tax Shift

When this key is depressed before a department or PLU, the tax shift key reverses the tax shift of the department/PLU. i.e. a PLU with no tax status could be preset with Tax1, Tax2... or All.

Add Check

This key is used to add a number of checks together.

Separate Check

This key is used to separate a check so that the check can be paid for by a number of people.

Transfer Check

This key is used to transfer one check to another check number.

Sub-Total

This key displays the total of the sale including any tax calculation. It can be preset as compulsory if required.

X/Time

This key is used as a multiplication key or for displaying the time and date on the display.

Valid

This key is used to print a one-line validation through the receipt/journal printer.

P/Bal

This key is used to input a previous balance.

Check#

This key is used in the check system to input a check number. The ECR can be programmed to generate a unique check number.

Table#

This key is used to enter a table number that can be printed on the customer bill or kitchen printer.

Guest#

This key is used to enter the number of guests at a table.

Service

This key is used to close transactions temporarily in a check system.

Print Check

This key is used to print the details of a check to either the receipt or bill printer.

Charge Tip

This key is used to input an amount of tips received.

Slip Print

This key is used to print the details of a check to the slip printer.

Price Change

This key enables the clerk to adjust the preset price of an item.

Open Price

This key is used to enter a price against an open PLU.

Price Enquiry

This key is used to enquire on the price of a item without registering the item.

Macro 1 ~ 10 Keys

Macro keys are used to execute a preset number of keystrokes automatically. A Macro can include another Macro if required.

Clerk#1 ~ 10 Keys

The clerk keys are used to sign a clerk on / off the ECR. They are also used for clerk interrupt operation.

Clear Key

Used to clear entries made on the keyboard. It is also used to clear error tones.

PLU#

This key is used to enter PLU (price look-ups) codes or bar-codes.

Dept#

This key is used to enter sales against a department that does not appear on the keyboard.

Post Receipt

If the receipt was turned off during a sale, this key will issue a receipt after the sale has been completed.

Receipt On / Off

Turns the Receipt On / Off

Set Menu#

Used to sell a Set Menu that is not on the keyboard.

Not Found PLU

If a PLU or barcode is not set-up on the ECR and an attempt is made to sell the product, by pressing the Not Found key the item can be programmed during registration for subsequent sales.

2nd Price

This key is used to sell the PLU or Barcode item at its second price.

Level #1, Level #2 and Level #3

These keys are used to change between menu levels

Set Menu 1 ~ 10

Used to sell a Set Menu item.

PLU 1 ~ 120

Used to assign a specific PLU number to the keyboard.

Dept 1 ~ 40

Used to assign a specific department to the keyboard.

www.AnchorData.co.uk

Clerk sign on/off

Key lock position: REG mode or VOID mode

There are 3 kind of clerk registration. These are push button clerk entry, real clerk key entry and clerk code entry.

Push button clerk entry (default)

If you select this system, clerks can register by pressing corresponding push button clerk key.

Clerk code entry

If you select this system, clerks can register by entering corresponding clerk code.

There are two clerk code entry systems. (See P-Mode Program Option 33-A)

Clerk code entry with secret code

When the clerk code entry with secret code system is selected, clerks must enter their secret code to register.

Operation

* Sign on

----- Secret code (Max. 6 digit) which will not be displayed.

CASHIER

* Sign off (Simply press **CASHIER** key, then the clerk will sign off.)

CASHIER

Clerk code entry with clerk number

When the clerk code entry with clerk code system is selected, clerks only enter their number to register.

Operation

* Sign on

-- Clerk code (1 - 99) which will be displayed.

CASHIER

* Sign off (Simply press **CASHIER** key, then the clerk will sign off.)

CASHIER

Real clerk key entry

If you select this system, clerks can register by inserting a corresponding real clerk key.
Max. 15 real clerk keys are available.

Clerk registration mode

Key lock position: REG mode or VOID mode

There are two modes in clerk registration. These are stay down mode and popup mode.
Refer to the P mode program option #5B for detail.

Stay down mode

If clerk is in stay down mode, clerk stays registered until the clerk signs off.

Popup mode

If clerk is in popup mode, clerk is automatically signed off when the clerk finalises a transaction.

www.AnchorData.co.uk

Floating clerk system

Key lock position: REG mode or VOID mode

This function will not work if P mode program option #5A and P mode communication option #6 are not programmed.

When floating clerk operation is enabled

To use this function you must set the floating clerk enable flag of the registers which run under floating clerk system.

When a clerk signs on a register under floating clerk system, the clerk is locked on other registers.

If a clerk sign on a register and attempts to sign on another register, error message "USING!" will be displayed and the clerk can not sign on.

When floating clerk operation is disabled

When floating clerk operation is disabled, a clerk can sign on registers simultaneously.

Clerk time in/out

Key lock position: REG mode or VOID mode

Clerk time in/out entry use code entry system. This function will not work if P mode communication option #1 is not programmed.

Register administrates the clerk attendance and working hour not with the clerk sign on/off data but with the clerk time in/out data. So clerks must time in when come to work and time out when finish job.

Operation

TIME
IN/OUT

----- Secret code (Max. 6 digit) which will not be displayed.

TIME
IN/OUT

www.AnchorData.co.uk

Entering starting cash amount

Key lock position: REG mode

If you want to prepare the change due in drawer before starting sale and enter the amount of the cash, use R/A and P/O function. For more detail about the R/A and P/O function will be discussed later.

Addition

Operation

Subtraction

Operation

Item sale entries

Key lock position: REG mode

Single item entries

Direct entries

Enter a unit price and press a **DEPT** key or a **PLU** key.

If you use a programmed unit price, then press corresponding key only.

Operation

Indirect entries

Enter a item code and press a **DEPT#** key or a **PLU#** key when using a programmed unit price.

Otherwise enter open price together.

Operation

PLU entry by barcode scan

A PLU can be sold by scanning its barcode.

Example (for above operations)

1000

Not found PLU

Not found PLU function automatically runs when you try to sell a PLU that is not existing.

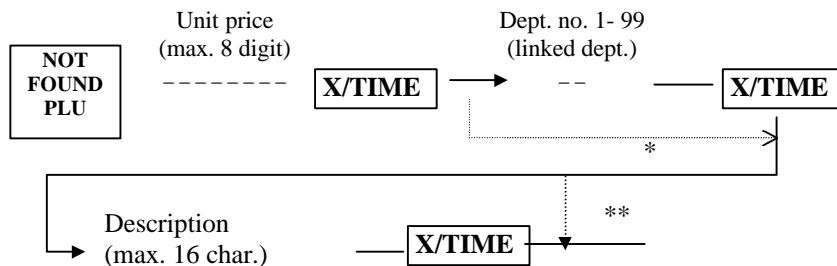

Register will register that PLU and sell the item.

When function activated register will show “NOT FOUND” and turn on the buzzer.

If you want to ignore that PLU entry press **CLEAR** key, or press **NOT FOUND PLU** key to continue.

To abort Not Found PLU function during its operation, press **CASH** key.

Operation

* When P mode program option 22B is set. (Dept link is not compulsory.
In this case if pressing **X/TIME** without dept no. will link nothing.)

** When P mode program option 22C is set. (Description entry skip)

Refer to the P mode program option programming for the details.

Example

CLERK1		#08
TIME 11:02		NO.010780

In this example mix and match table #1 description is "CHEAP!!!", discount amount is 0.1£ and trip level is 5. PLU1 and PLU2 are linked to mix and match table #1, and PLU3 is not linked to any mix and match table.

Finalising of transaction.

Key lock position: REG mode

Press the key **SBTL** at any point of transaction when you want to know the sale subtotal including tax. Then the sale subtotal will appear in the display.

Cash or cheque tendering

Enter the amount tendered by the customer and press the **CASH** key if it is a cash tender or press the **CHEQUE** key if it is a cheque tender. When the tendered amount is greater than the sale amount, the register will show the change due amount. Otherwise it will show a deficit and the message "SUBTOTAL".

Example

~
SBTL
2000 **CASH**

Charge tendering

Enter the amount tendered by the customer and press the **CHARGE** key or press charge# and **CHARGE#** key. The charge-tendered amount can not exceed the sale amount.

If the amount is equal to the sale amount, it will finalise transaction, or it will show a deficit and the message "SUBTOTAL".

Tendering without tender amount entry.

According to the sale type press the **CASH** key, **CHARGE** key, **CHARGE#** key or **CHEQUE** key without entering tender amount. Then the register will show the total sale amount.

Example

~
SBTL
CHARGE2

DATE	04/01/1996	THU

TOTAL		■110.00
CASH		■110.00
CLERK1		#08
TIME 13:31		NO.012163

Tax operation.

Key lock position: REG mode

Each PLU and DEPT can be programmed for tax1 through tax4. And there are four tax systems available. These are straight % VAT, Add on by tax table, Add on by straight % and GST (Canadian Goods & Services Tax). GST can be programmed only for tax4. Refer to the tax PGM part for detail.

Collecting tax.

Normal operation.

In normal transaction taxes are automatically collected according to the item's programmed tax status.

Example

1000	PLU1
1000	PLU2
1000	PLU3
1000	PLU4
	CASH

DATE	04/01/1996	THU
PLU1 T1		■10.00

PLU3 T3		■10.00
PLU4		■10.00
TAX AMT 1		■0.50
TAX AMT 2		■1.00
TAX AMT 3		■1.50
TOTAL		■43.00
CASH		■43.00
CLERK1		#08
TIME 17:20		NO.012916

In the above example PLU1 is programmed for tax1, PLU2 is for tax2 and PLU3 is for tax3. And tax1, tax2 and tax3 are programmed for straight % add on tax. Tax1 rate is 5.00%, tax2 is 10.00% and tax3 is 15.00%.

Imposing tax using tax shift key.

When you need to impose a tax on an item, which is not programmed for that tax, use tax shift function. Press tax no. and **TAX** key before sell the item.

This function affects the next one item entry, and can't impose tax on the sale subtotal.

Example

1000 **PLU1**
1000 **PLU2**
2 **TAX**
1000 **PLU1**
2 **TAX**
1000 **PLU2**
CASH

TIME	15:29	NO.024002

* In this example currency exchange rate for **CURR1** key is 2.0

No sale

Press **# / NS** without any entry. The drawer will open and you can exchange.

Check operation

Key lock position: REG mode

Two different check entry systems are available. One is Soft check system and the other is Hard check system. It depends on the check type on the all clear procedure.

Soft check: In this mode, the balance due and the details of the order are stored in the check memory. Check contents will be printed while you finish the transaction with payment. Or you can print the bill using the **PRT CHK** key.

Hard check: In this mode, only the previous balance is stored in the check memory. The bill contents will be printed whenever you make the check serve operation so you can have the whole bill after payment.

The **PRT CHK** key does nothing in this mode.

New check

For a new guest, open a new check and assign a check number.

And then finalising the transaction temporarily using **SERVICE TOTAL** key.

Additional ordering

For an existing guest, enter the check number and press **CHECK#** key. The previous balance will be displayed. Make a sale and end the transaction temporary use **SERVICE TOTAL** key or finish the transaction completely by the payment (See the previous section).

Bill Printing

Print Check

In the soft check mode use **PRT CHK** key while the check is opened, or enters the check number and press

PRT CHK key. The printing port is defined in the **PRT CHK** key status in the soft check mode. The full details of the check will be printed everytime

Slip Print

In the soft check mode the **Slip Print** key prints only details that have not already been printed. Insert the Bill into the slip printer. Enter the check number and press the **Slip Print** key, the slip printer will print any details that have

not already been printed. The next time you want to print details on this check reinsert the SAME bill, enter the check number and press the **Slip Print** key. The printer will feed one line below the previous details and print any details that has not already been printed.

Hard Check Printing

In the hard check mode use bill contents are printed whenever you end the transaction temporary using

SERVICE TOTAL key. The printing port is defined in the **SERVICE TOTAL** key status in the hard check mode.

Bill addition

Follow the following procedure to add some bills.
All bills are added to the first bill.

	ADD CHECK
1	CHECK #
2	CHECK #
3	CHECK #
	SERVICE TOTAL

DATE	09/01/1996	TUE

Clerk interrupt operation.

Key lock position: REG mode

This function will not work if P mode communication option #6 is not programmed.
Both push button clerk entry and clerk code entry can be used together.

This function makes you change from one clerk to another in the middle of transaction.
If clerk interrupted during the transaction the register will temporarily tender the current transaction and the first clerk is signed off, then the second clerk signs on automatically.
If the second clerk has previously temporarily tendered transaction, register will recall the amount.
Clerk registration for clerk interrupt is different from the normal registration.
See below for detail.

Clerk registration for clerk interrupt operation.

Clerk code entry with clerk no.

-- Clerk no. which will be displayed.

CASHIER

Clerk sign off for clerk interrupt operation.

To sign off directly in the middle of transaction, simply press **CASHIER** key.
Then the register will temporarily tender the current transaction, and directly sign off.

Example

Clerk 1 registered and make transaction.

- * Register temporarily close transaction when the clerk is interrupted by another clerk.
- ** Register recalls previous sale amount if the newly registered clerk has a temporarily closed transaction.
- *** Pressing **SBTL** key can be programmed as compulsory when finalizing transaction in clerk interrupt operation

Clerk Interrupt can also be programmed for floating clerk system. This allows a clerk detail and sales value to be transferred from one register to another. Therefore a clerk can start off a transaction on one register and finalize it on another.

Training mode

Training mode is used when the clerk practices various register operations.
Operations under training mode do not affect memories except for training total memory.
Register will update only the training total area memory if it is in training mode.
This function will not work if P mode program option #18 is not programmed.

Enter training mode

- Individual opened checks report operation.

161 - **SBTL** - Start Check# - **X/TIME** - End Check# - **X/TIME**

- Checks opened by clerk report operation.

170 - **SBTL** - Clerk# - **X/TIME**

** PRE-POLL REPORT

- Prints pre-poll report.
- IRC reporting on register will not work when pre-polling done but not fetched by PC. If you want not to get the pre-poll reports via PC but to clear them, run the pre-poll reporting function in Z-mode. Then the pre-poll reports are cleared and IRC reporting will work.

*** STRING REPORTs

- 5 string reports are available where X is the string report number.
- String reports can be programmed to run at a specific time (A scheduled time)

**** STOCK REPORTs

- Stock reports (17, 19) are effective when running on the master ECR (which holds the stock taking data. Refer to the P mode communication option #6 for detail.). And only running under consolidating report mode.

www.AnchorData.co.uk

Consolidating Reports.

Turn mode key to X or Z Position

Use this function, to consolidate all the sales information for a number of registers.

Operation

Program download.

Use this function, if you need downloading data from a register to others.

Operation

* Note: This register # is first register of the destination register group, it is not the resource register.

How to program alphanumeric characters

Using direct character key on keyboard.

- Pressing each character keys can make normal characters.
- To make character as double size, use Double key on keyboard.

Example

Double **C** **O** **M** **E** **Double** **A** **N** **D** **Double** **S** **E** **E**

- To make a small letter entry, use CAPS key.

Example

S **CAPS** **M** **A** **L** **L**

- To modify incorrect character entry, use BKSP key.

Example

W **E** **L** **C** **O** **M** **W** **BKSP** **E**

Using character code

90key KBD can not contain all characters on keyboard.

But you can make a character entry, which is not on current 90key keyboard, by using character code entry.

To make a character code entry, simply enter 3-digit code continuously.

This method is also available for 160key KBD.

Example

To program the word “Two £” where space exist between Two and £, and £ as a double character.

084 119 111 032 003 156 (Refer to the character code table)

Display Print Description Definitions

- | | |
|-----------------|--|
| 1. TIME | - Printing message. |
| 2. DATE | - Printing message. |
| 3. CHANGE | - Printed on receipt to show the amount to change. |
| 4. TOTAL | - Printed on receipt to show the total amount. |
| 5. NON-ADD NO. | - Printed on receipt to show non-add number. |
| 6. R/A TOTAL | - Printed on receipt to show the total upon completion of a Received on Account operation. |
| 7. P/O TOTAL | - Printed on receipt to show the total upon completion of a Paid Out operation. |
| 8. DISCOUNT | - Not used currently. |
| 9. SALE DISC | - Not used currently. |
| 10. SURCHARGE | - Not used currently. |
| 11. SALE SURC | - Not used currently. |
| 12. AMOUNT | - Printed on receipt to show the amount of discount. |
| 13. CLK LOGIN: | - Printed on receipt to show the name of the clerk logging into the system. |
| 14. CLK LOGOUT: | - Printed on receipt to show the name of the clerk logging out of the system. |
| 15. TIME CLKIN: | - Printed on receipt to show the clock-in time. (Time keeping function) |
| 16. TIM CLKOUT: | - Printed on receipt to show the clock-out time. (Time keeping function) |
| 17. TIME IN: | - Printed on timekeeping report. |
| 18. TIME OUT: | - Printed on timekeeping report. |
| 19. TAXABLE 1 | - Printed on receipt to show the amount taxable at rate 1. |
| 20. TAXABLE 2 | - Printed on receipt to show the amount taxable at rate 2. |
| 21. TAXABLE 3 | - Printed on receipt to show the amount taxable at rate 3. |
| 22. TAXABLE 4 | - Printed on receipt to show the amount taxable at rate 4. |
| 23. TAX AMT 1 | - Printed on receipt to show the tax 1 amount added. |
| 24. TAX AMT 2 | - Printed on receipt to show the tax 2 amount added. |
| 25. TAX AMT 3 | - Printed on receipt to show the tax 3 amount added. |
| 26. TAX AMT 4 | - Printed on receipt to show the tax 4 amount added. |
| 27. NET 1 AMT | - Printed on receipt to show the net amount taxable at VAT rate 1. |
| 28. NET 2 AMT | - Printed on receipt to show the net amount taxable at VAT rate 2. |
| 29. NET 3 AMT | - Printed on receipt to show the net amount taxable at VAT rate 3. |
| 30. NET 4 AMT | - Printed on receipt to show the net amount taxable at VAT rate 4. |
| 31. FOREIGN AMT | - Printed on receipt to denote the amount in foreign currency. |
| 32. HOME AMT | - Printed on receipt to denote the amount in home currency. |
| 33. CHANGE RATE | - Printed on receipt to show the currency rates. |

34. GAS CNT	- Number of gallons pumped (in case of gallonage PLUs) printed on receipt.
35. GAS AMT	- Price per gallon (in case of gallonage PLUs) printed on receipt.
36. SCPN AMT	- Store Coupon amount printed on receipt.
37. TAX TOTAL	- Total combined taxes charged for this sale(when single tax line is printed.)
38. BFW	- (Balance Forward) printed on guest check and displayed above amounts carried forward in a check-tracking environment.
39. CKPD	- (Checks Paid) printed on guest check and displayed above amounts carried being paid in a check tracking environment.
40. SIGN ON	- Displayed when a clerk press TIME IN/OUT key to clock in.
41. CHANGE	- Displayed above change amount.
42. TIME IN	- Displayed when a clerk clocks in.
43. SUBTOTAL	- Displayed when SUBTOTAL key is depressed.
44. COUPON	- Displayed above coupon amount when coupon key is depressed.
45. NON-ADD #	- Prompt displayed for compulsory non-add entry.
46. OPEN AMOUNT	- Prompt displayed after PLU code is entered for PLUs programmed as open.
47. POST TENDER	- Displayed while performing post-tender operations.
48. INS PAPER	- Prompt displayed when validation is required.
49. VALIDATION!	- Prompt displayed if you try and ignore the one above.
50. ADD CHECK	- Displayed when add check feature is finished.
51. TRANS CHECK	- Displayed when transfer check feature is finished.
52. SIGN ON	- Displayed when the keylock is in the REG/VOID position and a clerk is signed off.
53. VD MODE	- Displayed when the keylock is in the VOID position.
54. OFF MODE	- Displayed when the keylock is in the OFF position.
55. REG MODE	- Displayed when the keylock is in the REG position.
56. X	- Displayed when the keylock is in the X position.
57. Z	- Displayed when the keylock is in the Z position.
58. PGM	- Displayed when the keylock is in the PGM position.
59. S MODE	- Displayed when the keylock is in the S position.
60. X REG MODE	- Displayed when the keylock is in the X position and the register is in the middle of transaction.
61. CRR1 CHANGE	- Printed to denote currency conversion change at rate 1.
62. CRR2 CHANGE	- Printed to denote currency conversion change at rate 2.
63. VOID MODE	- Printed at the top of receipt created while in VOID mode.
64. TRAIN MODE	- Printed at the top of receipt created while in VOID mode.

Error Message Definitions

- | | |
|-----------------|---|
| 1. BUFF. FULL | - The buffer for check has reached capacity. |
| 2. REQ AMOUNT | - This operation requires an amount entry. |
| 3. NO PLU! | - The number entered is not a valid PLU. |
| 4. HALO OVER | - The amount entered exceeds the programmed HALO. |
| 5. INACTIVE! | - The key pressed is inactive or VOID mode is inactive. |
| 6. F-STAT ERR | - Function key status is wrong. |
| 7. REQ GAL AMT | - This entry involves a gallonage PLU, and requires an amount entry. |
| 8. NEGATIVE | - This sale has gone negative. Negative sale is not allowed. |
| 9. REQ COND! | - This item has been programmed to require a condiment entry. |
| 10. NOT PGMMED! | - This key has not been programmed. |
| 11. OVERRIDE X | - The keylock has to be moved to the X-Mode in order to override an HALO amount, or other restriction. |
| 12. NO OVERRIDE | - X-Mode override is allowed. |
| 13. NO MANUAL | - Manual entry is allowed (scale function). |
| 14. SYS-OPN ERR | - System option is wrong. |
| 15. OPEN DRAWER | - The register has been programmed not to operate with the cash drawer open. |
| 16. NO LINK PLU | - Number of linked PLU is over 20 or linked PLU is not found. |
| 17. NO SINGLE! | - This PLU has been programmed as a single items PLU and can not be used within a sale. |
| 18. REQ NONADD# | - This operation requires the entry of a Non-Add number. |
| 19. ZERO AMT | - The register has been programmed to not allow negative sales, and to consider a zero amount as a negative sale. |
| 20. REQ ADDCHK | - Not used currently. |
| 21. REQ R/A! | - The operator is in the middle of a received on account operation, which requires a final depression of the R/A key to finalise the operation. |
| 22. REQ P/O! | - The operator is in the middle of a paid out operation, which requires a final depression of the P/O key to finalise the operation. |
| 23. REQ VALID | - This operation requires validation. |
| 24. REQ EAT-IN | - This operation requires a depression of EAT-IN, TAKE-OUT or DRIVE-THRU keys. |
| 25. REQ SCL PLU | - Not used currently. |
| 26. REQ SCALE | - This item requires an amount entry via SCALE key (either auto or manual) |
| 27. K-PRN FAIL | The kitchen printer has failed to respond. |
| 28. SEQ.ERROR | - The preceding key sequence is not allowed. |
| 29. REQ TARE# | - This PLU/scale item requires a tare weight entry. |
| 30. CASH-I-OVER | - The Programmed Cash-In-Drawer limit has been exceeded. |

31. REQ SUB KEY - The SUBTOTAL key must be depressed before continuing.
32. CHECK# AUTO - The operator has attempted to open a new guest check by assigning a check number. The register has been programmed to generate its own check numbers.
33. REQ TABLE# - Table number entry is required to open a guest check.
34. REQ GUEST# - The operator must enter the number of guests when opening a guest check.
35. NOT DISCNT - The preceding entry is discountable.
36. NO SAME CLK - The clerk attempting to open this guest check is not the original clerk who started the guest check.
37. NO DATA - The PLU can not be found. This message is displayed other than REG mode.
38. NO CHECK # - The check can not be found.
39. COMP XMODE! - This operation requires the keylock to be turned to the X position.
40. CHANGE BACK - Money has declared for received on account..
41. USING! - The check is being used.
42. OFF LINE! - IRC communication is off line.
43. NOT READY! - Remote printer is not ready.
44. NOW REAL! - Not used currently.
45. CLK INT ERR - An error has occurred while clerk interrupt.
46. SIGN OFF - Current operator has to sign off to sign on another operator if sign on method is using clerk secrete code.
47. REQ DEPT LK - Department link is compulsory.
48. REQ GRP LK - Group link is compulsory.
49. HALO ERROR - The number length is differing that is defined in the NS key HALO.
50. TENDER AMT - Amount is compulsory at tender.
51. SYSTEM ERR - Normal error.
52. RANGE OVER - The number entered is out of range.
53. E MODE - The keylock is in the wrong position.
54. OPERATION! - The operator has used an illegal key sequence.
55. BAD VALUE - The number entered is wrong.
56. DUPLICATE - The check is already exist.
57. REQ SIGNON - Sign on required.
58. PAPER END - The guest check printer has reached the end of the form.
59. MEMORY FULL - Memory is full.
60. BAD FUNC - Memory file number is wrong.
61. BUSY - Destination register is busy.
62. M&M ERR - An error has occurred while mix and match operation.
63. NOT ZERO - The PLU operator attempts to delete has sale count/amount.
64. NO DRAWER! - The drawer is no longer attached and is required in order to continue.

- | | |
|-----------------|--|
| 65. NO PAPER | - Slip printer is out of paper. |
| 66. REQ WASTE | - The operator is in the middle of a waste operation, and must depress the WASTE key in order to complete the operation. |
| 67. REQ P/BAL | - The register has been programmed to operate as a pre-check machine, and requires a previous balance entry. |
| 68. REQ CHECK# | - This register has been programmed to allow manual check number entry to begin a guest check transaction. |
| 69. REMOV PAPER | - Validation is complete and the form must be removed. |
| 70. REQ CA DEC | - Cash declaration has been programmed as compulsory, and must first be performed before reports may be generated. |
| 71. CRC ERROR | - An error has occurred in block checksum. |
| 72. ZERO PRICE | - Zero price item sale is not allowed. |
| 73. ERROR | - General error message. |
